

WHAT PROPELLECT IS

An evidence-first platform that surfaces official, open-data market metrics with full provenance and helps an investor decide **where** and **which** property to consider. AI narrates deterministic analysis; it never invents a price, rent, yield or attribute. **Live today:** an SA “Find My Investment” beta at app.propellect.com.au (suburb-level ranking from official CC-BY data, with a transparent evidence drawer). Current scale: [users / traffic].

WHAT WE WANT FROM YOU

Authorised access to on-market **SA sale listings** (national later) to power **Deal Hunter** + “Bring Your Own Deal”: match live listings to a saved buy box, rank them transparently, and produce a one-page **Deal Brief** — built from **your listing facts** + **public official market evidence** + **the user’s own inputs**.

AMBITION

SA first, then state-by-state nationwide — only when a state’s data (price, rent, yield, volume, growth) is present, fresh and licence-cleared. No nationwide claim until every offered state passes.

TRUST & SECURITY CONTROLS

Provenance on every figure; per-field licensing metadata; RLS-isolated per-user data; least-privilege database access (SECURITY DEFINER consumer RPCs, no client secrets); configurable caching, retention and purge to honour your terms (including delete-on-termination and provider-directed takedown).

The one question that unlocks everything: May Propellect charge for its derived analysis (scores, scenarios, alerts, Deal Brief) while keeping your listing display, agent contact and price information **free and attributed**? A written “yes” lets us build to your terms immediately.

PROPOSED PILOT

SA-only, time-boxed ([pilot length]) on a sandbox/trial tier: prove the listing→Deal Brief loop on a small live SA sample under your terms, attribution + link-back live, retention/purge enforced; convert to a production Product Schedule on success. Pilot size: [SA pilot size].

VOLUMES & MODEL

Expected reads/day: [listing/API volume]. Intended commercial model: [commercial model]. We will size to whichever plan/volume tier you recommend and start on the smallest that fits.
